Hiring Manager

Mountain Ridge Engineering Ltd.

Dear Hiring Manager,

I am writing to apply for the position of Junior Mechanical Engineer at Mountain Ridge Engineering Ltd. I am interested in this position because it fits with my engineering goals and would allow me to learn more about mechanical design, technical drawing, and problem-solving from experienced engineers. I am particularly interested in improving my design skills in a professional setting where accuracy, communication, and attention to detail are key.

In the past, I have modeled various parts in SolidWorks and AutoCAD for multiple projects, such as small race cars, skateboards, and basic machine components. These experiences helped me develop my design skills by checking dimensions and models while also understanding how small design changes can affect the final product. In addition, I learned to be more careful in reading drawings, following requirements, and presenting my work clearly. I am eager to further develop my CAD skills and learn new software like Revit to meet this position's requirements.

I have also gained experience working in teams, where communication and organization helped improve both productivity and the final project. In engineering projects, I have helped brainstorm ideas, develop prototypes, and test designs while writing report sections to explain project findings. This experience taught me that strong engineering work involves clear communication, testing, and improvement based on feedback. I believe these skills will be useful in a role where I will work independently and contribute to a larger project team.

Thank you for considering my application. Additional information about my education, projects, and skills is on my resume. I would welcome the opportunity to discuss how my interest in mechanical design, willingness to learn, and attention to detail would make me a suitable fit for Mountain Ridge Engineering Ltd.

Sincerely,

Deven Patel
